

## **ENVIRONMENTAL POLICY**

Aeromet International Limited is fully committed to protecting the environment and we are continually looking for new ways to improve the environmental performance of all our trading activities.

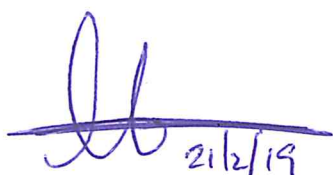

We recognise that our environmental influence extends beyond the sites where we operate and that, through partnership with both our suppliers and customers, significant environmental improvements can be made.

Our aims are to prevent pollution, reduce carbon emissions, cut down waste and increase the amount of environmentally friendly products we buy. Throughout all stages of our business we will consider and understand the implications to the environment whilst continuing to produce a high quality customer experience, we will take all practical steps to anticipate and prevent possible pollution events. In addition to this, we will ensure that we keep environmental awareness training of all our staff current.

We manage our activities to achieve these aims through our environmental management system which is certified to the international standard ISO 14001.

We will ensure that we comply with all legislative and any other requirements applicable to our business, and the industry requirements within which we operate, to ensure that we continually strive to reduce our environmental footprint wherever possible.

In order to drive continual improvement we have a number of environmental objectives in place as we believe we have a duty to run our business in a socially and environmentally responsible way on behalf of our customers, our staff and our local residents. An important part of our environmental approach is to set ourselves challenging targets to assess our environmental performance to ensure that our contribution to removing environmental constraints is measured and incremental.
